Product Description

The Latex Foley Catheter is flexible tubes that are passed through the urethra during urinary catheterization and into the bladder to drain urine, or for inserting fluids into the bladder. Latex Foley Catheter is used in departments of urology, internal medicine and surgery for drainage of urine and medication. Also used for patients suffering from moving with difficulty or being completely bed-ridden.

The Latex Foley Catheter is available in 2 types, Latex Foley Catheter, Hydrophilic Latex Foley Catheter, (incl. Tiemann Tip, The Tiemann Tip is used in urethral catheterization for those who suffer prostate hyperplasia and urethrostenosis). It's available in a variety of French sizes and balloon sizes.

The Hydrophilic Latex Foley Catheter is made from natural latex and with a hydrophilic coating. The hydrophilic coating becomes very slippery when wet.

The Latex Foley Catheter is made from natural latex, consists of shaft, drainage funnel, inflation funnel l(if present), irrigation funnel (if present), balloon (if present) and valve (if present). The Latex Foley Catheter has the following features:

Silicone coated

Color-coded for visualization of size

Alternative types are available

Sterile by EO

For single use only

Available with Rubber & Plastic valve

Intended Use

Latex Foley Catheter is inserted into the bladder through urethra and are indicated for routine urine drainage or for routine post-operative drainage and irrigation bladder.

Description of the Key Functional Elements

The 2-way Latex Foley Catheter consists of shaft, drainage funnel, inflation funnel, pre-loaded stylet (if present), balloon and valve. The pre-loaded stylet is generally used for paediatric patient at the beginning of urethral catheterization. The 3-way Latex Foley Catheter has additional irrigation funnel compared to 2-way catheter and it's used for irrigating of the bladder.
