

Medical compression products have a well-documented effect for prevention and treatment of venous deceases. The effect of compression therapy is achieved by compressing the limb with a graduated compression, strongest at the ankle and decreasing going up the leg. The compression helps the venous return by aiding the blood flow up the leg against gravity.

The compression is measured in millimetres of mercury(mmHg), an accurate measurement unit for pressure. The compression is created by very elastic yarns knitted in special machines programmed to get the exact pressure at certain positions of the sock. These positions are derived from common quality standards.

Planet can produce compression stockings according to any standard customers wish to apply.

COMPRESSION STOCKING

CLASS 1 STOCKING (15-21mmHg)

Pressure Rating	cB Pressure Value	
	hPa	mmHg
Planet-Y01	20-28	15-21
Planet-Y02	31-43	23-32

Remark : 1mmHg=1.333hPa

AD

Size	S	M	L	XL	XXL
LD	36-42cm	36-42cm	36-42cm	36-42cm	36-42cm
cC	30-36cm	33-39cm	36-42cm	39-45cm	42-48cm
cB	19-23cm	21-25cm	23-27cm	25-29cm	27-31cm

- LD (Heel to the length of 3cm below the knee)
- cC (Calf Circumstance)
- cB (Ankle Circumstance)
